Class 101

Cab setup

- PARK BRK up: main switch on and AWS change-end key in
- Start the engines (right throttle button for the front engine; the rear engine button is in the cab)
- Reverser to Forward; the gear selector only moves then
- Check the AWS and deadman isolation lights are out
- Marker lights to White
- Open doors (RUD TRIM)

Cleared to depart

- Close doors, wait for the guard buzzer (round aux)
- Check the signal
- Gear selector to 1st (nearest), vacuum brake to Released
- Throttle up to Full; change up through 2nd, 3rd and 4th with the throttle closed
- Acknowledge AWS with the gear lever
- Brake: throttle to Idling, gear to Neutral, vacuum brake into the apply zone; Lap holds the application
