Class 31

Cab setup

- Master key and brake key in (PARK BRK up), battery on
- Reverser to Engine only, start the engine (right throttle button)
- AWS isolation light out, DSD breaker on
- Marker lights on (AUTO BRK)
- Release the handbrake in the cab
- Train brake to Full service until the pipe is charged

Cleared to depart

- Check the signal
- Reverser to Forward
- Loco brake to Release (flap lever away)
- Train brake to Running, wait for the pipe to charge
- Power controller notch by notch; the TCA walks one gate per send
- Acknowledge AWS with the gear lever
- Power controller to Off before moving the reverser back
