Class 20

Cab setup

- PARK BRK up: master key in; brake selector (vacuum / air, goods / passenger) in the cab
- Start the engine (right throttle button)
- Reverser from Off through Engine only to Forward: the power handle only moves then
- Check the AWS isolation light is out
- Lights to Front markers
- Loco brake at Full, vacuum brake at Full (parked)

Cleared to depart

- Check the signal; release the handbrake in the cab
- Vacuum brake to Running, loco brake to Release
- Power handle to On, then into the power zone
- Acknowledge AWS with the gear lever
- Brake: power Off, vacuum brake towards Full; Emergency at the far end
- Change direction: power Off first, then the reverser
