Master key
flat = out · rotate up = in

● recommended starting position

Cab setup

- PARK BRK up: master key in; brake selector and timing switch in the cab
- Start the engine (right throttle button): the power handle only moves with it running
- Reverser from Off through Engine only to Forward
- Check the AWS isolation light is out
- Lights to A markers + headlight
- Loco brake at Full, train brake at Full (parked)

Cleared to depart

- Check the signal; release the handbrake in the cab
- Train brake to Running, loco brake to Release
- Power handle to On, then into the power zone
- Acknowledge AWS with the gear lever
- Brake: power Off, train brake towards Full; Emergency at the far end
- Shut down: the Neutral position of the brake valve is in the cab
