Class 70

Freightliner

Cab setup

- Cab enable and master key in (PARK BRK up); give the key a few seconds before the first reverser move
- AWS/TPWS and DVD to Normal: both aux squares lit (the loco loads with both isolated)
- TMS: F1 Air Brakes, F3 Cut In, F4 Lead, F6 Save when the brake screen shows Cut Out; brake mode Goods / Passenger in the cab
- Headlights to Day (AUTO BRK); Tail in the rear cab when running light
- Parking brake released in the cab; automatic brake at Full service, independent applied, throttle Idle
- Engine stopped itself while parked? Right throttle button starts it again

Cleared to depart

- Check the signal; reverser to Forward (move it again if it does not take)
- Automatic brake to Release (pull back), wait for the brake pipe to charge
- Independent brake to Release (flap lever back)
- Throttle notch by notch; a heavy train may need Notch 8 to get going, go easy in the wet
- Acknowledge AWS and the vigilance with the gear lever
- Braking: throttle to Idle, automatic brake into the service zone; bail off the loco (round aux) on a heavy train
